# TEMPERATURE CONTROL

# Project Participants

(sec 2 & 4)

- 1 امير السيد عبدالسميع محمد
- 2 امير عبدالمولى امين بدران
- 3 السيد محمد محمد عبدالسميع
  - 4 ايه السيد محمد قمر
  - 5 سعد السيد سعد ابويحيي
  - 6 ساره عابر محمد احمد
  - 7 حسام مصطفى يوسف
  - 8 محمود السيد محمد سعيد
  - 9 محمود محمد فتحى محمد
- 10 يوسف عادل محمد عبدالعزيز

## The Equipments

- 1 Arduino Kit.
- 2 LM35(Temperature Sensor).
- 3 Connection Wires.
- 4 Resistors 220 Ohm, 360 Ohm.
- 5 Transistor 2n2222.
- 6 Fan 220 Volt.
- 7 Opto Coupler.

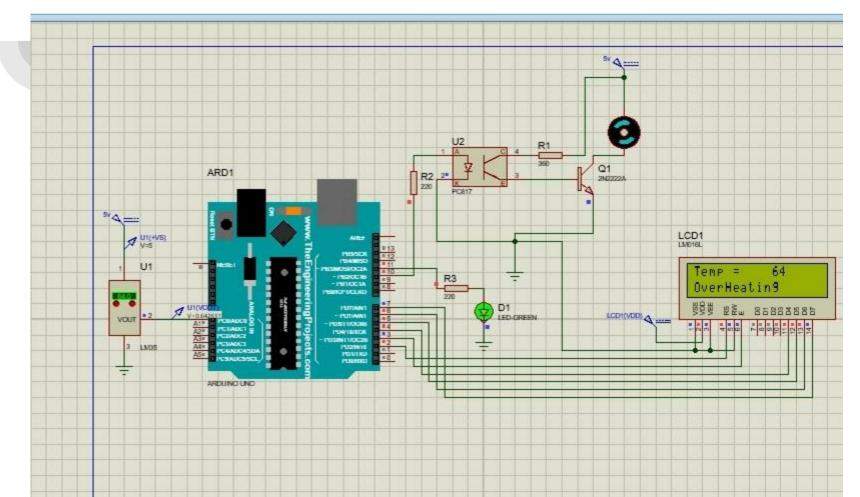

#### The Code

```
#include <LiquidCrystal.h>
LiquidCrystal Lcd(2,3,4,5,6,7);
double sensorvalue;
int Temp;
double LED;
void setup() {
  Lcd.begin (16, 2);
  Lcd.print("Temp = ");
  pinMode(10, OUTPUT);
  pinMode(A0,INPUT);
  pinMode(11, OUTPUT);
```

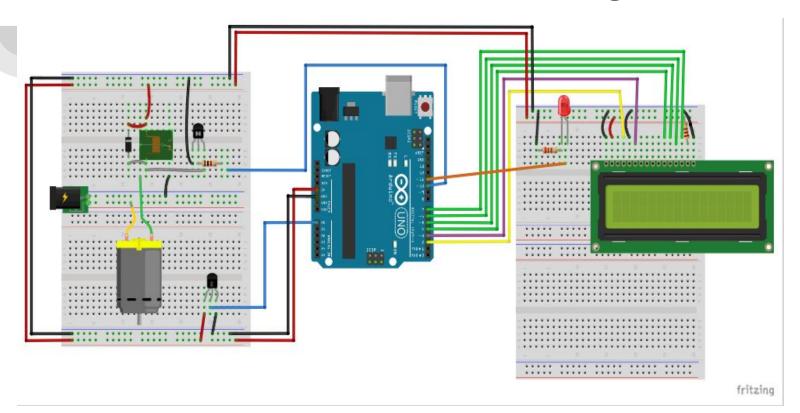

```
sensorvalue = analogRead(A0);
sensorvalue = sensorvalue*(5.0/1023.0);
LED = sensorvalue *100;
Temp = sensorvalue *100;
Lcd.setCursor(10,0);
Lcd.print(Temp);
if (Temp < 50) {</pre>
LED = map(LED, 0, 50, 0, 255);
else {
  LED = 255;
analogWrite(11, LED);
if (Temp > 30) {
  digitalWrite(10, HIGH);
  Lcd.setCursor(0,1);
  Lcd.print("OverHeating");
} else {
  digitalWrite(10, LOW);
  Lcd.setCursor(0,1);
  Lcd.print("Normal
                          ");
```

void loop() {
